DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 17 and 18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 17 recites the limitation "supplying the samples of said intermediate correlation signal to M input terminals of an adder simultaneously with the step of writing". However, after reviewing the drawings and the specification, particularly Fig. 1 and pg. 11, line 11-pg. 12, line 4, it is the understanding of the examiner that the samples of the intermediate correlation signal are supplied to the input terminals of the multiplier, not the adder, simultaneously with the step of writing.

Allowable Subject Matter

3. Claims 1-16 are allowable over prior art because related references do not disclose an L-chip accumulator for generating an intermediate correlation signal from samples created by an

oversampling rate which is N-fold of chip rate and a controller for supplying correlation signals to the adder when the correlation signals are supplied to the memory.
